

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ANNUAL REPORT

OF THE

SECRETARY OF INTERNAL AFFAIRS

122858

OF THE

COMMONWEALTH OF PENNSYLVANIA.

PART III.

INDUSTRIAL STATISTICS.

VOLUME XXX.

1902.

WM. STANLEY RAY.
STATE PRINTER OF PENNSYLVANIA
1903.

REPORT
OF THE
BUREAU OF INDUSTRIAL STATISTICS.
COMMUNICATION.

Department of Internal Affairs,
Harrisburg, Pa., May 1, 1903.

To His Excellency Samuel W. Pennypacker, Governor of the Commonwealth of Pennsylvania:

Sir: In compliance with the requirements of the Constitution, I have the honor to submit herewith, for transmission to the General Assembly, the thirtieth annual report of the Bureau of Industrial Statistics, the same being Part III of the reports of this Department.

I am, very respectfully,

Your obedient servant,

JAMES W. LATTA,
Secretary of Internal Affairs.

LETTER OF TRANSMITTAL.

Harrisburg, Pa., May 1, 1903.

Hon. James W. Latta, Secretary of Internal Affairs of the Commonwealth of Pennsylvania:

Sir: I have the honor to present herewith the thirtieth annual report of the Bureau of Industrial Statistics. The report contains a presentation of labor conditions in the anthracite and bituminous coals fields for the fiscal year ended June 30, 1902, and covers the manufacture of pig iron, steel, rolled iron and steel and tin plate for the calendar year ended December 31, 1902. The report also contains the 1896 Comparative Series, and contains a valuable directory of the pig iron, steel, rolled iron and steel and tin plate industries.

Very respectfully,

JAMES M. CLARK,
Chief of Bureau.

INTRODUCTION.

The report for this year is not embellished with pictures showing processes of manufacture, but in their stead comes a presentation of absorbing interest—that of labor conditions in the anthracite and bituminous coal fields for the fiscal year ended June 30, 1902, or just in the midst of the anthracite strike which created such worldwide interest.

The anthracite field work covers about two months of the strike period, and the figures are consequently for the ten months immediately preceding the strike, and cover the entire field exclusive of the washeries. The presentation shows that the miners averaged 175 days or practically two-thirds time—that 35,842 persons were employed with average earnings of \$495.97 or \$2.83 per day. This was exclusive of powder and other mine supplies. Fifty-eight thousand five hundred and ninety-two inside help, including miners' laborers, had employment for 173 days with average earnings of \$363.47 or \$2.10 a day. Forty-seven thousand three hundred and forty-six outside help, including breaker boys with average daily wage of 50 cents to \$1.10 a day, worked 177 days with average earnings of \$306.37 or \$1.73 per day.

In the bituminous field it was found that 79,121 miners worked 232 days with average yearly earnings of \$503.87 or \$2.16 per day. Eighteen thousand eight hundred and fifty-three inside people worked 244 days with average earnings of \$546.67 or \$2.24 per day. Thirteen thousand two hundred and fifty-five outside people worked 243 days with average earnings of \$453.93 or \$1.87 per day.

The very marked difference in conditions surrounding these two fields is shown by the large increase of labor in the anthracite field relative to the number of miners over that of the bituminous field. As for instance it will be seen that 58,592 inside people were employed in the anthracite mines as against 35,842 miners, while in the bituminous field only 18,853 inside people were employed as against 79,121 miners. A still more marked difference is found in the outside people, the anthracite field showing 47,346 as against 35,842 miners, while in the bituminous field only 13,255 were employed as against 79,121 miners.

Approximately 20 to 25 per cent. of the anthracite miners own their homes, and practically one-eighth of the bituminous miners.

The remarkable increase shown in the production of pig iron, steel and rolled iron and steel has been anticipated by the student of industrial conditions, but to many others the enormity of the figures will be a revelation.

The 1892 comparative series, or that ten years' series of representative establishments in the leading industries of the State, having run its course has passed out of existence, but there remains the 1896 series, which with this report closes its seventh year. A study of this series will show with much exactitude the conditions surrounding the many industries it represents, and with few exceptions increased prosperity.

Attention is called to a valuable directory of the following leading industries of the State, viz: Pig iron, steel, rolled iron and steel and tin plate.

COMPARATIVE STATISTICS OF MANUFACTURES. 1896 SERIES.

CAPITAL INVESTED.

COMPARISON OF AGGREGATE CAPITAL INVESTED—SAME ESTABLISHMENTS, 1896, 1897, 1898, 1899, 1900, 1901 AND 1902.

(NOTE.—In this table the aggregate amount of capital invested by the same establishments for the years 1896, 1897, 1898, 1899, 1900, 1901 and 1902 is presented, with the relative increase or decrease, together with the increase or decrease 1902 over 1896. Eighty-eight industries, representing 771 establishments, are considered.)

Character of Industry and Years.	Number of establishments considered.	Capital.	Increase(+) or decrease (—) as compared with the preceding year.	Increase (+) or decrease (—) 1902 as compared with 1896.
----------------------------------	--------------------------------------	----------	--	--

STEEL CASTINGS.

1898,	4	20.0	—9
1899,	4	21.0	+1.0
1900,	4	20.2	—8
1901,	4	22.1	+1.9
1902,	4	20.5	—1.6	+2.7

PRODUCTION IN TONS OR QUANTITY.

COMPARISON OF AGGREGATE TOTAL PRODUCTION, IN TONS, OR GIVEN QUANTITY—SAME ESTABLISHMENTS, FOR THE YEARS 1896, 1897, 1898, 1899, 1900, 1901 AND 1902.

NOTE.—In this table the aggregate production, in tons or quantity by the same establishments for the years 1896, 1897, 1898, 1899, 1900, 1901 and 1902 is presented, with the relative increase or decrease, together with the increase or decrease 1902 over 1896. Eighty-eight industries, representing 771 establishments are considered.

Character of Industry and Years.	Number of establishments considered.	Total production in tons or given quantity.	Increase(+) or decrease (—) as compared with the preceding year.	Increase (+) or decrease (—) 1902 as compared with 1896.
STEEL CASTINGS.				
		Tons.		
1896,	7	17,362
1897,	7	18,313	+951
1898,	7	27,786	+9,473
1899,	7	34,845	+7,059
1900,	7	33,231	—1,614
1901,	7	30,501	—2,730
1902,	7	42,116	+11,615	+24,754
STEEL BILLETS, SLABS, BLOOMS, ETC.				
1896,	4	429,553

PRODUCTION OF ROLLED IRON AND STEEL IN PENNSYLVANIA FOR 1902.

Capital invested, \$247,870,718
 Total tonnage production (gross tons), 9,429,365

Classified as follows:

Rails,	1,272,222
Iron and steel structural shapes,	1,074,856
Cut nails and spikes,	33,638
*Plates and sheets including black plate for tinning,	1,808,992
Other rolled products including billets, sheet bar, tin bar, etc., not further fin- ished by the mills reporting,	5,239,657

Value of production (not including the tin plate works) \$360,338,972

Average number of workmen employed during the year

exclusive of the tin plate works,	95,720
Aggregate wages paid to these workmen,	\$60,721,858
Average days in operation,	285
Average yearly earnings,	\$634 68
Average daily wage,	\$2 23
Average value per ton,	\$39 16
Cost of labor per ton,	\$6 60

*Includes 231,106 tons black plate and other sheets made by the Tin Plate Works.

ANALYSIS.

1896 Series.

In our 1896 publication this bureau started a comparative series of some of the many industries in the State, and classified them. We began with 1,162 establishments in 1896. In 1897, when making the compilation, it became necessary to drop 243 plants owing to various causes, such as failures, going out of business, etc. Through the series of years this elimination has been going on until we have but 771 establishments to compare this year. These tables, found on pages 7 to 349, are an interesting study to the political economist, as they are indicative of all the varied industries in the State, as tabulated on the above tables, and speak volumes as to the prosperous era through which we are passing.

Your attention is called to comparison of the tables on pages 97 to 246, particularly to the number of persons employed, wages paid, average yearly earnings and the value of the product. In 1896 these 771 establishments employed 129,240 people. There has been a continual increase in employment during the seven years covered in these tables until in 1902, 203,927 persons were employed, or a gain over 1896 of 57.8 per cent. So it is with the wages paid, from \$49,430,808 paid in 1896 the wages have continually increased until in 1902 \$98,432,570 were paid to working people, or a gain of 99.1 per cent. Having worked more days in 1902 than in 1896, it follows that the yearly earnings are greater. There was a gain of 23 days in 1902, and where the earnings in 1896 were \$382.47, in 1902 they increased to \$482.68, or an advance of 26.2 per cent.

Still continuing the analysis as to the value of the production, the market value of the production of these 771 establishments in 1896 was \$185,249,628 as against \$421,141,115 in 1902, or a gain of 127.5 per cent.

An interesting table will be found on pages 400-402 showing the average daily wage in the 88 industries considered in this series, which ranges from \$3.64 paid in the manufacture of tool steel down to 77 cents paid in the manufacture of silk broad goods and ribbons. As we gather statistics of the wage worker without regard to sex, of course the industries in which female help predominate show a lower rate of average daily wage.

Pig Iron.

In 1896 this State produced 4,026,350 gross tons of pig iron, and there has been a rapid increase in production in the seven years,

with the exception of 1900, when there was a slight decrease, until we have the gratifying result in this year's report of a total tonnage of 8,111,642 gross tons, or a gain of 101.4 per cent.

The gain in value is even more noticeable, showing a steady increase year by year. As iron is indicative of business prosperity, especially in this State, a slight idea may be gained as to business conditions from the figures presented. The value of the output of pig iron in 1896 was \$45,172,039, which with the increased tonnage and the advance in price shows a total value in 1902 of \$126,857,231, or a gain of 188.3 per cent., or nearly three times as much in the seven years.

The number of working men in this industry was largely increased, the report in 1896 showing the average number employed to be 11,580, while in 1902 17,101 were employed, or 47.2 per cent. of an increase.

A furnace is supposed to be in blast 365 days, or the entire year, but in treating of all the furnaces under one proposition we have to show the average number of days of all furnaces worked, as some are in blast but part of the year and then discontinue, while new furnaces are built and begin business the latter part of the year. In 1896 the average days of employment was 289, while in 1902 the average was 314, or a gain of 8.7 per cent.

The average daily wage of the working men in the manufacture of pig iron has, with the exception of for the years 1897 and 1898, which show slight decreases, advanced steadily. We find from our comparisons that the average daily wage in 1896 was \$1.37; in 1897 \$1.36, and that in 1898 it dropped to \$1.32. In 1899 an increase of 14.4 per cent. brought the average daily wage up to \$1.51, which has gradually increased until in 1902 the average daily wage is shown to be \$1.89, an increase of 52 cents, or 37.9 per cent. over the wage paid in 1896.

The increase in the number of days of employment and the average daily wage, together with the increased tonnage, all tend to add to the yearly earnings of the workingmen, which have advanced steadily. In 1896 the average yearly earnings of each workingman was \$396.30, and in 1902 \$595.97, a gain of \$199.67 or 50.4 per cent.

Steel.

The production of steel in the State has kept pace with the times, and added great wealth to Pennsylvania, having to its credit the production in 1902 of 8,511,195 gross tons of steel as against a production in 1896 of 3,345,529 gross tons, or a gain of 154.4 per cent. The tonnage is made up as follows: Bessemer, 4,208,354 gross tons;

open hearth basic and acid, 4,220,279 gross tons, and crucible and other processes 82,562 gross tons. For further analysis see page 409.

Rolled Iron and Steel.

This is the iron age, and no limit to its uses, more of it going into buildings than ever before. Iron is taking the place of stone for bridge building, besides its many other uses, until Pennsylvania alone in 1902 produced 9,429,365 gross tons of finished product, such as rails of all kinds and sizes 1,272,222 gross tons; iron and steel structural shapes, 1,074,856 gross tons; cut nails and cut spikes, 33,638 gross tons; iron and steel plates and sheets, 1,808,992 gross tons and other rolled products, i. e. tack plate, wire rods, spike rods, splice bars, hoops, bands, etc., 5,239,657 gross tons.

The capital invested in plants producing a rolled product in 1896 was \$123,951,317, which has increased to \$247,870,718 in 1902, or a gain of 99.9 per cent.

The total amount of wages paid to the workmen employed, exclusive of office help and salaried men, was \$60,721,858 in 1902, as against \$53,334,787 in 1901, making a gain of 13.8 per cent. Total wages paid out in 1896 was \$23,832,628, which shows by the above comparison that the rolling mills paid for labor in 1902 \$36,889,230 more than in 1896, or a gain of 154.8 per cent.

It follows that more people were employed to make the large increase of wage, and the report shows for 1896 53,573 workmen employed, while in 1901 there were 86,086 engaged in the work, and in 1902 they were increased to 95,720 workmen, or a gain of 78.7 per cent. over the year 1896.

There has been a constant increase in the yearly earnings in this industry in the seven years, and as shown the average yearly earnings per man was \$189.79 more in 1902 than in 1896, a gain of 42.7 per cent. In consequence of the above statement, the average daily wage rose from \$1.77 in 1896 to \$2.23 in 1902, an advance of 26 per cent. Attention is called to a table of counties showing where these 9,429,365 gross tons of rolled product was produced, together with percentages worked out.

Tin Plate.

As our comparative series commences with the year 1896, the manufacture of tin plate has been advanced very rapidly, and now compares more favorably than any of the other industries during the time in which comparisons are made. It will be seen from the

following figures taken from the comparative table just how great a gain has been made in the different branches, together with the wages paid and the amount of production.

The statistics show a capital invested for 1896 of \$3,627,275, while in 1902 there were \$10,858,403 invested capital, or an increase of 109.4 per cent. The production has increased from 158,306,490 pounds in 1896 to 428,443,592 pounds in 1902, or an increase of 270,137,102 pounds, or 170.6 per cent. The value of the tin plate manufactured in 1902 has increased \$11,478,944 over the value in 1896, or a gain of 247.5 per cent. The large increase in production has necessitated a corresponding increase in the number of working people employed. In 1896 there were 3,194 persons employed as compared with 8,905 in 1902, an increase of 5,711 workmen, or 178.3 per cent. The amount of wages paid during the year of 1896 was \$1,437,226, and in 1902 the amount paid was \$4,506,105, or a gain of 213.5 per cent. The average yearly earnings for 1896 was \$456.47, while in 1902 the average was \$502.02, an increase of \$49.47, or 10.8 per cent. The average daily wage of the persons employed has advanced year by year from \$1.80 in 1896 to \$2.55 paid in 1902.

Coal.

If the average person was asked to state the chief industry of Pennsylvania, his immediate response would probably be that it is coal mining, since the operations and the manufacturing interests connected with this greatest natural mineral wealth of the State reaches such colossal proportions.

It was in Pennsylvania that the first anthracite coal was discovered in 1790, and it is still this State that contains practically the output of the world. The first shipment of anthracite was made in a memorable year of our history...a date that pointed most significantly to the great future of the young Republic...the year 1812, when nine wagon loads were taken from Pottsville to Philadelphia.

Unlike a crop that can be again planted after the reaping, this rich product of the earth, when once it is consumed, reproduces itself no more forever as far as the present race of man and his needs are concerned. In the early years those who brought the coal to the surface were as improvident in its waste as if it were inexhaustible. Later, the spirit of commercialism that grasps the age, dragged it relentlessly from the storehouse of the centuries, because of the vast opportunities for temporary gains. It is only within a recent period that a realizing sense of approaching loss in the vanishing treasure has been felt in some measure and that methods of careful conservation have been employed.

Devices are now used to render marketable much that was once rejected. The long, blue mountains of culm are being eaten away by the furnaces and engines of industry; rivers are being dredged and forgotten chambers are being scanned with covetous eyes for what might have been overlooked in the days of opulent veins. In many cases the very foundations of the earth have been menaced by the greed for the precious supports which the laws of nature and of man have decreed should remain forever untouched. The very dust of the coal has been made into bricquettes for burning, and thus as time passes still closer economy will be observed with relation to mining.

There was much agitation throughout the State in 1900 over the condition of the mine-workers in the anthracite field, the question of wages being uppermost. The disquietude resulted in a strike of three months' duration which terminated by the granting of a ten per cent. increase and some other concessions by the operators. The unions grew in number as well as membership and irritation continued to exist between employer and employe until a climax was reached in May of 1902, when another strike was declared which was unbroken for six months. Through the intervention of the President of the United States, a commission was appointed to investigate the differences that caused so much friction and if possible arrange a settlement; an innovation now recognized as a part of a permanent basis in the adjustment of labor disputes.

This bureau had not before collected statistics of the coal mining industry, but it was now believed that the time had come to take up the subject and because of an absolutely impersonal point of view, much might be done to clear away the haze that had obscured the mind of the public and present the matter in a practical and concrete form.

The work was begun early in the history of the strike and it was found that the coal mining companies were perfectly willing to give all the data required and in fact that they courted investigation, confident that those in their employ were receiving fair treatment.

The result of the inquiries was not made public during the sessions of the Anthracite Strike Commission, the records of the bureau of statistics were however, consulted continuously by the counsel of both sides while that investigation was in progress, and were of invaluable assistance in showing the actual wage conditions of other industries in Pennsylvania.

It is shown from the reports that there are nine counties in the State producing anthracite, or hard coal, with the number of collieries in each, and twenty-six counties producing bituminous, or soft coal—semi-bituminous being included in the latter list.

The methods of mining these two kinds of coal are so different

that there can be no comparison except along general lines, and an explanation should be given at this point.

Four methods are employed in reaching anthracite, namely: By means of stripping, drift, slope and shaft. For the coal lying close to the surface, as in some parts of Luzerne county, it is more economical to remove the superficial dirt and rock. A vein lower down and having an "outcropping" in the side of a hill can be reached at less expense by making a drift. The pitching veins are mined by slopes and the lower veins are taken out through a shaft.

These shafts are driven from 80 feet to seventeen hundred feet deep, entailing upon the operator a large expenditure of money. A breaker is built for the purpose of cleaning the coal, removing the slate and other impurities and assorting it into sizes for the market. These breakers cost from \$50,000 to \$150,000 each, and the landscape up and down the anthracite valleys is marked with the tall, dusky towers of these castles of industry.

Other accompaniments of mining include the driving of "headings" to open up "chambers," mules to bring the coal to the foot of the shaft, carpenter and blacksmith shops, stables for the mules, powder house, etc., until a half million or more dollars will be invested before any coal is shipped.

It is altogether different in the mining of bituminous coal. Here little preparation is needed for the market as it is sold without regard to the size and is often placed in the cars ready for shipment just as it comes from the mine. The coal is procured with less difficulty than anthracite, although the veins are much thinner. Being much softer neither as much muscular effort nor as much powder is necessary. The mines are usually entered from drifts, although there are some slopes not often extending below 300 feet. Instead of breakers "tipples" and screens are used when the coal is to be prepared for market. Much of the bituminous coal is used for coking, a ton of coke being produced from 1.6 tons of coal.

The difference in mining the two varieties of coal is particularly noticeable when the employes are considered. There are 79,121 miners employed in the bituminous regions, or 71.1 per cent of the entire number in bituminous mining; while there are 35,842 miners in the anthracite field, or 25.3 per cent of the whole number thus engaged.

Again the figures are at variance with regard to the inside help required to get the coal to the surface after it is "cut" by the miners. In the bituminous mines from which our statistics were procured, there were employed 18,853 inside workmen, exclusive of miners, or 16.9 per cent., while in the mining of anthracite it required 58,592, or 41.3 per cent. of the whole. These comprised mine laborers, track layers, pump runners, foot and slope men, company men, drivers.

door boys, etc., whose services were necessary to bring the coal to the surface. At that point in bituminous mining it required 13,255 men to take care of the tonnage and place it on board the cars for shipment, the percentage being 11.9 of all the workmen employed. In the anthracite industry 47,346 employes were required, including engineers, firemen, blacksmiths, carpenters, loaders, platemen, slate-pickers (the last named being chiefly boys) to prepare the coal for market after it had left the mines, and load it for shipment, or 33.4 per cent.

The total amount of wages paid to the anthracite workers exclusive of office help, management and salaried men in the nine counties was \$53,577,638. In the twenty-six counties comprising the bituminous region, the total amount of wages was \$56,190,179.

The two products come into competition in the commercial world and also have their distinctive markets. In the past there has been a healthy rivalry between the hard and the soft coal operators in securing a market and thus the output has been growing steadily year after year. The question is now being raised as to how long the anthracite coal will last in its limited area, after the exhaustive mining of the almost three quarters of a century.

ANTHRACITE COAL.

Statistics of the Anthracite Coal Operations for the Fiscal Year
Ending June 30, 1902.

Number of miners,	35,842
Number of inside workmen including labor- ers, trackmen, pumpmen, etc.,	58,592
Number of outside workmen, including breaker boys,	47,346
Total number of employees,	141,780
Aggregate wages paid to miners,	\$17,776,586
Aggregate wages paid to inside workmen, including laborers, trackmen, drivers, etc.,	\$21,296,393
Aggregate wages paid to outside workmen, including breaker boys,	\$14,504,659
Total number of tons of coal shipped,	43,807,862
Value on board cars,	\$93,680,586
*Average number of days in operation (miners),	175
*Average number of days in operation (inside work- men),	173
*Average number of days in operation (outside work- men),	177
Average yearly wages (miners),	\$495 97
Average yearly wages (inside workmen),	\$363 47
Average yearly wages (outside workmen),	\$306 37
Average daily wage (miners),	\$2 83
Average daily wage (inside workmen),	\$2 10
Average daily wage (outside workmen),	\$1 73
Average number of tons of coal mined by each man per year,	1,222
Average number of tons of coal mined by each man per day,	7

*This includes about two months of the fiscal year during the strike.

Note.—The above table does not include coal produced by the "washeries."
